Projects

TrackPrep	 GitHub Live
- Built a full-stack platform to track coding practice, recruitment pipelines, and study schedules with secure authentication and personalized dashboards. - Developed the platform using React, Node.js, Express.js, PostgreSQL, and REST APIs following a modular layered architecture with separate routes, controllers, and services. - Integrated Upstash Redis caching with PostgreSQL to reduce database overhead and improve response times; deployed the application using Docker, Vercel, Render, and Neon PostgreSQL.	
Vega	 GitHub Live
- Built a Web3-native AI agent marketplace on Solana enabling AI agent registration, execution, and pay-per-use interactions through verified on-chain SOL micropayments. - Integrated Google Gemini AI, Phantom Wallet, Solana transaction verification, and Crypto.com MCP Server for secure AI-powered blockchain interactions. - Secured a Top 10 Finish in the Google DeepMind Track at Electrothon 8.0 with a solution combining AI, blockchain, and decentralized payments.	

Position of responsibility

Computer Science and Engineer's Community <i>Executive member</i>	Sept 2024 - present
